MASTER OF SCIENCE – INFORMATION TECHNOLOGY

at

Department of Computer Science

INDUS UNIVERSITY

May - June 2026

Acknowledgement

We would like to extend our heartfelt gratitude to everyone who has contributed to the successful completion of our project, “Easy Label.” This project is the result of the collective effort, dedication, and guidance of many individuals, and we deeply appreciate their invaluable support throughout this journey.

With sincere appreciation, we express our deepest thanks to **Mr. Vivek Dave**, our respected guide, for his continuous encouragement, insightful suggestions, and expert guidance. His mentorship has been a constant source of inspiration and has played a crucial role in transforming our ideas into a practical and well-structured project.

We are equally grateful to our internal mentors and the esteemed faculty members of the **Department of Computer Science, IICT**, for their unwavering support, motivation, and constructive feedback during every stage of development. Their guidance has helped us refine our technical and analytical skills and achieve our project objectives with confidence.

Our heartfelt thanks also go to Indus University for providing us with the necessary resources, technical facilities, and an environment conducive to learning and innovation.

Finally, we wish to express our sincere appreciation to our teammates, friends, and family members for their cooperation, patience, and encouragement. Each contribution—whether direct or indirect—has been instrumental in bringing Easy Label to life.

CONFIDENTIAL

Date: 09/04/2026

To Whom It May Concern

This is to certify that Shah Tisha Ketan bhai has successfully completed the project titled "Easy Label" during her internship period with our organization.

She actively contributed to the project and completed all tasks and objectives assigned to her in a timely and satisfactory manner. We found her performance to be professional and satisfactory throughout the internship period.

We wish the student a successful learning experience.

A handwritten signature in blue ink, appearing to read 'Shah Tisha Ketan bhai', is positioned above the company name.

Introduction

1.1 OVERVIEW

- This website will help users to purchase printed labels online. User can choose different shapes from the website. On the basis of that shapes, User have to fill the Height and Width of the Label. User can give height and width of the labels according to his requirements. After the User have to fill the quantity of a labels.
- User have 3 options to select design of label. User can upload design of a label or He can give Suggestion of design to our Design expert or He can send Design later.
- User have to submit his details for delivery of labels. After order confirmation user get the message of order delivery.

1.2 OBJECTIVE OF THE PROJECT

- Many times people need to purchase labels. But people can not find the exact design which he needs. So user have to search on many website. But in this website user can easily get the design of label which he wants. So in this website users submit some information about the label he wants to purchase. This website is so user friendly so any user can purchase label as he needs.

1.3 SCOPE OF THE PROJECT

- The scope of the Easy Label system includes providing an online platform for customers to design and order customized labels according to their requirements. The system allows users to select label shape, size, material, and quantity, and also provides options to upload artwork or request design assistance.
- The system supports features such as artwork validation, automated price calculation, order placement, and order tracking. It also includes an admin panel for managing orders, reviewing customer submissions, and updating order status.

- The system is mainly focused on improving the efficiency of the label ordering process and enhancing customer experience. However, the current system does not include advanced
- Features such as online payment integration or real-time delivery tracking, which can be considered in future enhancements.

Organization Profile

ITD - Intelligent Technology Development is an end-to-end IT solution provider, web development, and graphics design company based in India.

They offer high-quality and cost-effective offshore software and website development services to organizations around the world. They have their development center in Ahmedabad, India, where they continuously upgrade the skill levels of their resources to ensure professional competency in their services.

As a professional software and website design and development company, their key strength lies in effective web design and application development. Since their inception, they have successfully delivered a large number of stylish and functional websites and portals for global clients.

They believe in the evolution of simple websites into interactive, cost-saving, and revenue-generating platforms. They can develop advanced systems capable of handling large volumes of data and transactions. Their clientele spans across multiple countries and various business domains.

Following is a summary of services they offer:

Branding, Corporate Identity Creation, and Concept Development Services:

- Website design, development, hosting, and maintenance
- Mobile website design using jQuery, JavaScript, HTML5, CSS3.0, PhoneGap, and jQuery Mobile
- Search engine optimization (SEO), internet marketing, and social media marketing
- Content management systems like Joomla, WordPress, OpenCart, and more
- eCommerce (online shopping), back-office management, human resource management, and support system solutions
- Customized application development using technologies such as Ruby on Rails (ROR), PHP, and other scripting technologies

Existing System

- The existing system for label ordering is primarily manual and lacks proper automation. Customers who want to purchase customized labels are required to communicate with the printing company through offline methods such as phone calls, emails, or by visiting the store physically. In this process, the customer provides details like label shape, size, quantity, and design requirements manually.
- The artwork or design files are usually shared separately via email or messaging platforms, which makes the process unorganized. The company staff manually records the order details in registers or basic spreadsheets. Price calculation is also done manually based on size, material, and quantity, which may lead to inconsistencies.
- Furthermore, there is no centralized system to track orders, manage customer data, or monitor progress. Customers do not receive real-time updates about their orders, and communication is entirely dependent on manual follow-ups. This results in inefficiency, delays, and poor customer experience.

Problem Areas of Existing System

- The existing system suffers from several drawbacks that affect both operational efficiency and customer satisfaction.
- One of the major issues is that the process is time-consuming. Since all activities such as order placement, design submission, and confirmation are done manually, it requires continuous communication between the customer and the company. This increases the overall processing time.
- Another problem is the lack of transparency. Customers are unable to track the status of their orders, which creates uncertainty and dissatisfaction. There are no automated notifications or tracking mechanisms available.
- The system is also prone to errors due to manual data entry. Mistakes in entering label dimensions, quantity, or customer details can lead to incorrect orders and financial loss. Miscommunication between the customer and the company further increases the chances of errors.
- In addition, there is no proper mechanism to validate artwork files. Customers may submit incorrect file formats, low-resolution designs, or improper dimensions, which can result in poor print quality.
- Data management is also inefficient, as records are stored in scattered formats such as paper files or spreadsheets. This makes it difficult to retrieve past data or generate reports when needed.
- Overall, the existing system does not provide a user-friendly experience and fails to meet modern business requirements.

Need for the New System

- Due to the limitations of the existing system, there is a strong need for a new, automated solution that can improve efficiency, accuracy, and user experience.
- The new system should provide a simple and convenient platform for customers to place orders online without the need for manual communication. It should allow users to customize labels easily by selecting shape, size, quantity, and material.
- From the business perspective, the system should reduce manual workload and provide a centralized platform to manage all orders and customer data. It should also improve communication between the company and customers by providing timely updates and notifications.
- Technically, the system should include a secure database to store all information, a reliable file upload mechanism for artwork, and an admin dashboard to monitor and control operations. The system should also be scalable so that new features can be added in the future.
- Thus, the new system is required to enhance productivity, reduce errors, and provide a better overall experience for both customers and administrators.

Proposed System

- The proposed system, “Easy Label,” is a web-based application designed to automate and simplify the label ordering process. This system provides an efficient and user-friendly platform where customers can design and order customized labels online.
- In this system, users can visit the website and explore various label options. They can select the desired shape, enter the required dimensions such as height and width, and specify the quantity. The system also allows users to upload their own artwork, request design assistance, or submit the design later.
- Once the order details are entered, the system automatically calculates the price based on the selected specifications. The user can then place the order and receive confirmation. The system also stores customer details for delivery purposes and provides updates regarding order status.
- On the administrative side, the system includes a secure login for administrators. Admins can view all orders, manage customer submissions, review artwork files, and update order status. This ensures proper control and efficient management of operations.
- The proposed system also includes additional modules such as an artwork checker, which helps validate design files, and a contact module for handling customer inquiries.
- Overall, the proposed system eliminates manual work, reduces errors, improves communication, and enhances the overall efficiency of the label ordering process.

User Interface Screens

Admin:

The screenshot shows a web browser window with the URL `localhost/easylabel/public/admin/index/login`. The page title is "Admin Login". Below the title, there are two input fields: "Admin User Name" (containing "admin") and "Password" (empty). A blue "Login" button is positioned below the "Password" field. A red rectangular box highlights the "Password" field and the "Login" button. A tooltip message "Please fill out this field." with an exclamation mark icon is displayed over the "Password" field.

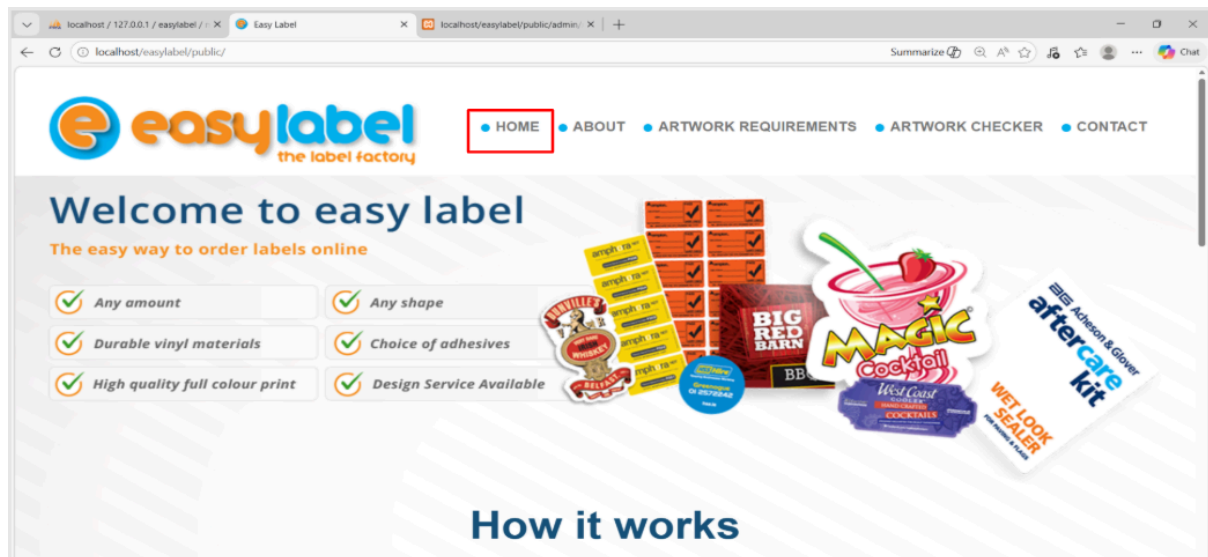

The screenshot shows the same "Admin Login" page. The "Admin User Name" field contains "admin" and the "Password" field is filled with "*****". A blue "Login" button is located below the "Password" field. A red rectangular box highlights the "Login" button.

ABOUT :

ARTWORK REQUIREMENTS:

The screenshot shows the 'Artwork Requirements' page of the Easy Label website. The navigation bar includes links for HOME, ABOUT, ARTWORK REQUIREMENTS (highlighted with a red box), ARTWORK CHECKER, and CONTACT. The page title is 'Artwork Requirements' with a subtitle 'choosing design software'. The text explains that when designing for print, the type of software and file type are crucial. It recommends vector-based software like Adobe Illustrator over Photoshop. It states that vector software ensures higher quality and is easier to manipulate. A note says 'Don't panic' if requirements aren't met. The next section, 'how to setup artwork', explains that artwork should be set up with print and cut processes in mind, mentioning 'bleed' as an area beyond the label edges. The footer of this section defines 'BLEED' as an area that allows for movement on the press and guarantees no white edges.

easylabel

Artwork Requirements

choosing design software

When designing for print the first question is the type of software and file type you want to use. We recommend using a Vector based software such as **Adobe Illustrator** but **Photoshop** and other software can also be used if saved correctly.

Vector software will ensure that the quality of your finished product is higher than is achievable with a raster based artwork file.

When artwork is created using Adobe Illustrator it makes it easier for our Design Studio to manipulate if required before going to print.

Don't panic if your artwork doesn't meet the criteria above our design studio will be happy to assist you with all your requirements, including designing a new label or reproducing artwork at a very economical rate.

how to setup artwork

Artwork should be setup with the print and cut processes in mind. Label printing allows a great deal of precision on your artwork, however its worth bearing in mind that the process of printing and cutting your labels may result in small movement of the artwork in relation to cutters. For this reason we recommend that all artwork is supplied with bleed.

BLEED is an area that goes beyond the edges of the label size which allows for any movement on the press and guarantees that the label does not have a white edge once printed.

The screenshot shows the 'how to export your artwork' page of the Easy Label website. The navigation bar is the same as the previous page. The page title is 'how to export your artwork'. The text explains that the first thing to check before exporting is that all images have been embedded. It also recommends converting text to outlines. A list of five steps provides instructions on how to save files from Adobe Illustrator as AI or PDF. The page concludes with a note that the Design Studio is available for assistance and provides a phone number and chat option. The footer includes a link to Terms & Conditions, logos for Visa, Mastercard, and American Express, and the Easy Label logo.

easylabel
the label factory

• HOME • ABOUT • ARTWORK REQUIREMENTS • **ARTWORK CHECKER** • CONTACT

how to export your artwork

The first thing to check before exporting artwork is that all **images have been embedded**. Failure to do this will mean that they will be missing when the file is opened at a later stage.

We also recommend that all **text is converted to outlines**, if this isn't done before exporting they will be missing if the new operators system doesn't have the relevant fonts installed.

Below is an example of how you should go about saving files from Adobe Illustrator.

SAVING A FILE AS AN AI or PDF FILE

- 1 Select all > Type > Create Outlines
- 2 File > Save as or File > Save a Copy
- 3 Type a filename, and choose a location for the file (desktop etc)
- 4 Choose illustrator (.ai) or (.pdf) as the file format and click Save
- 5 In the illustrator / PDF options dialog box, set the desired options and click ok

We hope you find the above information helpful.

Ou Design Studio is here to help should you need assistance or Graphic Design

ARTWORK CHECKER:

The screenshot shows the 'Artwork Checker' page of the Easy Label website. The navigation bar includes links for HOME, ABOUT, ARTWORK REQUIREMENTS, ARTWORK CHECKER (highlighted with a red box), and CONTACT. The main heading is 'Artwork Checker' with a checkmark icon. Below it, a sub-heading asks 'WOULD YOU LIKE US TO CHECK YOUR ARTWORK BEFORE YOU SUBMIT YOUR ORDER ?'. The text explains that the service checks artwork for suitability for label printing and provides feedback. It also mentions a contact number (09722840530) and a chat option. The form on the right contains input fields for 'Your Name', 'Your Email', and 'Phone No.', an 'Upload' button with a cloud icon and the text 'Upload your artwork', a 'File(s)' input field, and a 'Message' text area. A 'SEND MESSAGE' button is at the bottom of the form.
